

Document Protection Summary

User Password:	(none — opens without a password prompt)
Owner Password:	ownerOnly
Permissions:	Accessibility extraction only
Algorithm:	AES-256 CBC (PDF Standard Security Handler Rev 6)

What this means

This document opens **without any password prompt**, yet its content is still encrypted with AES-256. The PDF viewer enforces the permission flags — printing, copying, and editing are all **disabled**. Only screen-reader / accessibility text extraction is permitted. Entering the owner password (**ownerOnly**) in Acrobat's security settings unlocks all operations.

This pattern is useful for **published reports or invoices** where you want recipients to view the document freely but prevent them from printing or extracting the content.

Permission Badges

x Print

x Print (low res)

x Modify

x Copy Text

x Annotations

x Fill Forms

+ Accessibility

x Assemble

```
container.Encrypt(new EncryptionOptions
{
    UserPassword = "", // no open password
    OwnerPassword = "ownerOnly",
    Permissions = PdfPermissions.ExtractForAccessibility,
});
```
